Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 16-18 and 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (5,749,278), hereafter Lee, in view of Shannon (GB209,002). Lee discloses main body 20; punching force provided by punch 20; depressing force provided by element 33; external force is inherently provided by a user; non-linear levering rod 31, 33, 30, 32; force receiving portion 32; pivot portion 31; bent portion juxtaposed elements 33 and 32; distance between the bent portion and the force-receiving portion is farther than the distance between the bent portion and the pivot portion as seen in figures 4 and 5; element 33 rests on the main body when no external force is exerted on the force-receiving portion as shown in figure 4; as seen in figure 4, the bent portion has an angle from 145 to 160 degrees juxtaposed elements 32 and elements 33. Lee does not disclose a roller bearing, however, Shannon teaches roller bearing h. It would have been obvious to a roller bearing in Lee as taught by Shannon in order to reduce friction between the moving parts of the apparatus. Note Shannon discloses a roller for reducing friction on page 2, lines 10-15.

Response to Arguments

3. Applicant's arguments with respect to claims 16-18 and 20-26 have been considered but are moot in view of the new ground(s) of rejection.
